12 x 10 ENCLOSURE POLE MOUNTING KIT (OPTIONAL) .......... 100888 (REV A)
1.0 GENERAL INFORMATION

The TWR Lighting®, Inc. (TWR®) Model AA0MTSS24VDC32M Controller is for the A1MET lighting of towers 201’ to 350’ AGL (above ground level) in accordance with the FAA Advisory Circular 70/7460-1L.

One (1) LEDBEACON3SL should be placed at the top, and two (2) LED Sidelights should be placed at mid-level, with respect to overall tower height.

The flash rate of the LEDBEACON3SL and the LED Sidelights is 30 FPM. All of the fixtures will flash in sync.

A by-pass switch (SW1) allows the controller to be turned on during daylight hours without covering the photocell. This is particularly helpful since the controller can be mounted indoors while the photocell is outdoors. SW1 can be operated by turning the toggle switch up to the “on” position.

The photocell is the three (3) blade, twist to lock, type.

Power supplied to the controller shall be 24V DC.

The controller housing is rated at NEMA 4X. It is suitable for indoor or outdoor mounting.

Controller functions that are monitored by remote alarms in the form of dry contact closures (Form C) are as follows:

- **POWER FAILURE**: Monitors 24V DC to the controller. Alarms in the event of power failure.
- **LIGHTS “ON”**: Gives an indication whenever the controller is activated.
- **LEDBEACON3SL/LED SIDELIGHTS**: Will give an alarm when the LEDBEACON3SL fails, or if one (1) of the two (2) LED Sidelights fails.
2.0 INSTALLATION

2.1 MOUNTING THE CONTROL CABINET
(Refer to Drawing 1265-R)

The power supply control cabinet can be located at the base of the structure or in an equipment building. Mounting footprints are shown on drawing 1265-R. Power wiring to the control cabinet should be in accordance with local methods and National Electrical Codes (NEC).

2.1.1 If the control cabinet is mounted inside an equipment building, the photocell should be mounted vertically on ½” conduit outside the building above the eaves facing north. Wiring from the photocell socket to the control cabinet should consist of one (1) each, red, black, and blue wires. The black wire is connected to the socket terminal marked “N,” the red wire is connected to the socket terminal marked “Lo,” and the blue wire is connected to the socket terminal marked “Li.” The photocell should be positioned so that it does not “see” ambient light, which will prevent it from switching to the nightmode.

2.1.2 If the control cabinet is mounted outside an equipment building, the photocell should be mounted vertically on ½” conduit so the photocell is above the control cabinet. Care must be taken to assure that the photocell does not “see” any ambient light that would prevent it from switching into the nightmode. The photocell wiring is the same as in 2.1.1.

The wiring from the photocell, input voltage, LEDBEACON3SL and the LED Sidelights should enter the control cabinet through the watertight connectors in the bottom of the cabinet. Inside the cabinet, the connections will be made on the terminal strips located at the bottom of the chassis. These connections are made as follows:

2.2 EXTERNAL PHOTOCELL WIRING
(Refer to Drawing 1265-R)

2.2.1 Connect the BLACK wire from the photocell to terminal block TB2 marked “-.”
2.2.2 Connect the Red wire from the photocell to terminal block TB2 marked “SSR.”

2.2.3 Connect the Blue wire from the photocell to terminal block TB2 marked “+.”

2.3 POWER WIRING  
(Refer to Drawing 1265-R)

2.3.1 Power wiring to the control cabinet should be in accordance with local methods and National Electrical Codes (NEC).

2.3.2 Connect the positive 24V DC to terminal block TB1 marked “+.”

2.3.3 Connect the negative wire to one (1) of the terminal blocks on TB1 marked “-.”

2.3.4 Connect the “earth” ground wire to the ground lug located to the right fuse holder marked “L.”

2.4 LEDBEACON3SL AND LED SIDE LIGHT WIRING  
(Refer to Drawings 1265-R, T1693, and 101058)

2.4.1 Connect the Black wire from the LEDBEACON3SL to terminal block TB1, terminal #2 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.4.2 Connect the White wire from the LEDBEACON3SL to terminal block TB1, terminal #1 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.4.3 Connect the Red wire from the LEDBEACON3SL to terminal block TB1, terminal #4 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.4.4 Connect the Green wire from the LEDBEACON3SL to terminal block TB1, terminal #3 inside the JB5/7SLSSR. (Refer to Drawing 101058)
2.4.5. Connect both **BLACK** wires from the LED sidelights to terminal block TB1, terminal #7 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.4.6 Connect both **WHITE** wires from the LED sidelights to terminal block TB1, terminal #5 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.4.7 Connect both **GREEN** wires from the LED sidelights to terminal block TB1, terminal #3 inside the JB5/7SLSSR. (Refer to Drawing 101058)

2.5 **OBSTRUCTION FIXTURE ALARM WIRING**
(Refer to Drawings 1265-R and 1265-S)

2.5.1 Alarm relays K1, K2, and Module M1 are provided for independent contact closures for: Power Failure, Lights “ON,” and LEDBEACON3SL / LED Sidelight Burnout.

2.5.2 Alarm wiring: To utilize all of the red light alarms, the customer will need three (3) pairs of wires to interface with the alarm device. One (1) wire from each of the three (3) pairs will terminate at the points marking common (C). The remaining wire from each pair will terminate as follows:

- **LEDBEACON3SL/LED Sidelight Burnout:** Connect to Module M1, terminal #14, for normally open, (or) terminal #12, for normally closed monitoring.

- **Power Failure Alarm:** Connect to relay K1, terminal #3, for normally closed, (or) terminal #4, for normally open monitoring.

- **Lights “ON” Alarm:** Connect to relay K2, terminal #3, for normally closed, (or) terminal #4, for normally open monitoring.

2.5.3 Alarm Testing: To test alarms, follow the procedures using an “ohm” meter between alarm common and alarm points.

3.0 THEORY OF OPERATION

3.1 POWER SUPPLY

24V DC enters the controller from the main power source. Line sits at the 6589C-FAA photocell waiting to be switched and also keeps the power failure relay K1 energized. When the 6589C-FAA photocell is activated, line SSR energizes K2 “Lights On” relay. This can also be accomplished by using the photocell by-pass switch (SW1). The output from this controller will go to the JB5/7SLSSR for LEDBEACON3SL and LED sidelights synchronization.

3.2 LEDBEACON3SL and LED SIDELIGHTS

SSR is being sent to Module M1, and then to the fuse holder “L.” Module M1 is the current sensor for all the LED fixtures. If either the LEDBEACON3SL, or one (1) of the LED Sidelights burns out, then Module M1 will send a contact closure, along with a visual indication.

3.3 JB5/7SLSSR

This is a control box to synchronize the sidelights to the LEDBEACON3SL. (Refer to Drawings 101084, 101058, and T1693)

WARNING

The use of non-OEM parts or modifications to original equipment design will void the manufacturer warranty and could invalidate the assurance of complying with FAA requirements as published in Advisory Circular 150/5345-43.
4.0 MAINTENANCE GUIDE

4.1 RED OBSTRUCTION FIXTURE

No scheduled maintenance is required. Perform on an as needed basis.

4.2 CONTROLLER

No scheduled maintenance is required. Perform on an as needed basis.

4.3 PHOTOCELL

The photocell is a sealed unit. No maintenance is needed or required other than replacement as necessary.
Securing Electrical Conduit

TWR Provides hose clamps (Part#HC6-10) for securing the lighting system conduit to a structure using the following method. Hose claps require 5/16” tightening tool such as nut driver, wrench, or ratchet bit.

1. To secure conduit (part#CONDUIT34) at side marker level place conduit horizontally to structure leg. Place hose clamp (part#HC6-10) diagonally across structure leg and conduit.

2. Tighten hose clamp firmly. Once hose clamp is secured trim any excess material. Be sure to bend edge of band to prevent any sharp edges being exposed.

3. Place second hose clamp diagonally in the opposite direction of first hose clamp. Repeat to tighten hose clamp firmly, trim any excess material and bend remaining band to prevent any sharp edges being exposed.

4. Perform steps 1 through 3 at remaining structure legs. Be sure not to overtighten hose clamp to prevent damage to threads.

* When installing conduit, other than in horizontal position, use hose clamps accordingly to ensure a secure installation.

*Local electrical code may supersede this recommended method.

Warranty & Return Policy

TWR Lighting®, Inc. (“TWR®”) warrants its products (other than “LED Product”) against defects in design, material (excluding incandescent bulbs) and workmanship for a period ending on the earlier of two (2) years from the date of shipment or one (1) year from the date of installation.

TWR Lighting®, Inc. (“TWR®”) warrants its “LED Product” against defects in design, material and workmanship for a period of five (5) years from the date of shipment. TWR®, at its sole option, will, itself, or through others, repair, replace or refund the purchase price paid for “LED Product” that TWR® verifies as being inoperable due to original design, material, or workmanship. All warranty replacement “LED Product” is warranted only for the remainder of the original warranty of the “LED Product” replaced. Replacement “LED Product” will be equivalent in function, but not necessarily identical, to the replaced “LED Product.”

TWR Lighting®, Inc. (“TWR®”) warrants its “LED Product” against light degradation for a period of five (5) years from the date of installation. TWR®, at its sole option, will, itself, or through others, repair, replace, or refund the purchase price paid for “LED Product” that TWR® verifies as failing to meet 75% of the minimum intensity requirements as defined in the FAA Advisory Circular 150/5345-43G dated 09/26/12. All warranty replacement “LED Product” is warranted only for the remainder of the original warranty of the “LED Product” replaced. Replacement “LED Product” will be equivalent in function, but not necessarily identical, to the replaced “LED Product.”

Replacement parts (other than “LED Product”) are warranted for 90 days from the date of shipment.

Conditions not covered by this Warranty, or which might void this Warranty are as follows:

- Improper Installation or Operation
- Misuse
- Abuse
- Unauthorized or Improper Repair or Alteration
- Accident or Negligence in Use, Storage, Transportation, or Handling
- Any Acts of God or Nature
- Non-OEM Parts
  The use of Non-OEM parts or modifications to original equipment design will void the manufacturer warranty and could invalidate the assurance of complying with FAA requirements as published in Advisory Circular 150/5345-43.
Warranty & Return Policy
(continued)

Field Service – Labor, Travel, and Tower Climb are not covered under warranty. Customer shall be obligated to pay for all incurred charges. An extensive network of certified and insured Service Representatives is available if requested.

Repair, Replacement or Product Return RMA Terms – You must first contact our Customer Service Department at 713-973-6905 to acquire a Return Merchandise Authorization (RMA) number in order to return the product(s). Please have the following information available when requesting an RMA number:

- The contact name and phone number of the tower owner or contractor
- The site name and number
- The part number(s)
- The serial number(s) (if any)
- A description of the problem
- The billing information
- The Ship To address

This RMA number must be clearly visible on the outside of the box. If the RMA number is not clearly labeled on the outside of the box, your shipment will be refused. Please ensure the material you are returning is packaged carefully. The warranty is null and void if the product(s) are damaged in the return shipment.

All RMAs must be received by TWR LIGHTING®, INC., 10810 W. LITTLE YORK RD. #130, HOUSTON, TX 77041-4051, within 30 days of issuance.

Upon full compliance with the Return Terms, TWR® will replace, repair and return, or credit product(s) returned by the customer. It is TWR®’s sole discretion to determine the disposition of the returned item(s).
Warranty & Return Policy
(continued)

**RMA Replacements** – Replacement part(s) will be shipped and billed to the customer for product(s) considered as Warranty, pending return of defective product(s). When available, a certified reconditioned part is shipped as warranty replacement with a Return Merchandise Authorization (RMA) number attached. Upon receipt of returned product(s), inspection, testing, and evaluation will be performed to determine the cause of defect. The customer is then notified of the determination of the testing.

- Product(s) that is deemed defective and/or unrepairable and covered under warranty - a credit will be issued to the customer’s account.
- Product(s) found to have no defect will be subject to a **$75.00 per hour testing charge (1 hour minimum), which will be invoiced to the customer.** At this time the customer may decide to have the tested part(s) returned and is responsible for the return charges.
- Product(s) under warranty, which the customer does not wish returned, the customer will be issued a credit against the replacement invoice.

**RMA Repair & Return** – A Return Merchandise Authorization (RMA) will be issued for all part(s) returned to TWR® for repair. Upon receipt of returned product(s), inspection, testing, and evaluation will be performed to determine the cause of defect. The customer is then notified of the determination of the testing. If the returned part(s) is deemed unrepairable, or the returned part(s) is found to have no defect, the customer will be subject to a **$75.00 per hour testing charge (1 hour minimum), which will be invoiced to the customer.** Should the returned parts be determined to be repairable, a written estimated cost of repair will be sent to the customer for their written approval prior to any work being performed. In order to have the tested part(s) repaired and/or returned, the customer must issue a purchase order and is responsible for the return shipping charges.

**RMA Return to Stock** – Any product order that is returned to TWR® for part(s) ordered incorrectly or found to be unneeded upon receipt by the customer, the customer may be required to pay a minimum **20% restocking fee.** Product returned for credit must be returned within 60-days of original purchase, be in new and resalable condition, and in original packaging. Once the product is received by TWR it’s condition will be evaluated and a credit will be issued only once it is determined that the RMA Return Terms have been met.

**Credits** – Credits are issued once it is determined that all of the Warranty and Return Terms are met. All credits are processed on Fridays. In the event a Friday falls on a Holiday, the credit will be issued on the following Friday.
Warranty & Return Policy (continued)

**Freight** – All warranty replacement part(s) will be shipped via ground delivery and paid for by TWR®. Delivery other than ground is the responsibility of the customer.

**REMEDIES UNDER THIS WARRANTY ARE LIMITED TO PROVISIONS OF REPLACEMENT PARTS AND REPAIRS AS SPECIFICALLY PROVIDED. IN NO EVENT SHALL TWR® BE LIABLE FOR ANY OTHER LOSSES, DAMAGES, COSTS, OR EXPENSES INCURRED BY THE CUSTOMER, INCLUDING, BUT NOT LIMITED TO, LOSS FROM FAILURE OF THE PRODUCT(S) TO OPERATE FOR ANY TIME, AND ALL OTHER DIRECT, INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, INCLUDING ALL PERSONAL INJURY OR PROPERTY DAMAGE DUE TO ALLEGED NEGLIGENCE, OR ANY OTHER LEGAL THEORY WHATSOEVER. THIS WARRANTY IS MADE BY TWR® EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED. WITHOUT LIMITING THE GENERALITY OF THE FORGOING, TWR® MAKES NO WARRANTY OF MERCHANTABILITY OR FITNESS OF THE PRODUCT(S) FOR ANY PARTICULAR PURPOSE. TWR® EXPRESSLY DISCLAIMS ALL OTHER WARRANTIES.**

*NO MEMORY

FUNCTIONS

1) Configuration: Selection of operation mode (<1 / >1 / >1< ) with or without memory.
2) Adjustment of current threshold as % of setting range.
3) Hysteresis adjustment from 5% to 50%.
4) Time Delay adjustment from 0.1 to 30sec.
5) Diagnostic button.
6) Yellow indicator light (See conditions below)
7) Dial Pointer (Green) LED
   - Steady green LED indicates that supply to the RM35 is present
   - Flashing green LED indicates a setting has been changed that requires a power cycle.

YELLOW LED CONDITIONS

NOTE: (*) ASTERISK INDICATES LED CONDITIONS OPERATE OPPOSITE FROM RM22JA31MR MODULE

Steady Burn Fixtures
- Yellow light *off*: Normal condition (no alarm)
- Yellow light flashing: Undercurrent condition detected and time delay initiated
- Yellow light *on*: Alarm condition

Flashing Fixtures
- Yellow light flashing inconsistent: Normal condition (no alarm)
- Yellow light flashing consistent: Under current condition detected and time delay initiated
- Yellow light *on*: Alarm condition

NOTE: To help troubleshoot or to set the sense current, turn the time delay(#4) to 0sec. Adjusting the current setting(#2) should only be done if it is known that all the lights are functioning. For Steady Burn adjust the current until the yellow LED comes *off*, and the relay is not dropping in and out. For Flashing Fixtures adjust the current setting(#2) until the yellow light starts to flash. This is the normal condition setting. Return the time delay(#4) back to 30sec.

*Due to current draw tolerances slight adjustments to setting #2 may be needed for proper alarming.
NOTES:
1. ITEM LED120-3RK CAN ONLY BE ORDERED AS A KIT.
2. ITEMS 105 & 106 CAN BE ORDERED FOR VALOX OR CAST, WHEN ORDERING PLEASE SPECIFY.
3. ITEM #2 CAN ALSO BE ORDERED AS A 3/4" BOTTOM HUB.
4. ITEM OL2CP USED IN OL2CLED3 FIXTURE.
